**KILO GOLDMINES LTD.
MANAGEMENT DISCUSSION & ANALYSIS
For the three and nine month periods ended June 30, 2012**

This Management Discussion and Analysis (“MD&A”) of Kilo Goldmines Ltd. (“Kilo” or the “Company”) is prepared as at August 23, 2012 and provides an analysis of the Company’s performance and financial condition for the three and nine month period ended June 30, 2012. The Board of Directors carries out its responsibility for review of this disclosure principally through its audit committee.

This MD&A should be read in conjunction with the Company’s unaudited interim consolidated financial statements for the period ended June 30, 2012, including the related note disclosure. The Company’s unaudited interim financial statements are presented on a consolidated basis with its wholly-owned subsidiary Kilo Goldmines Inc. and the partnership interests described in the notes to the financial statements, and are prepared in accordance with International Financial Reporting Standards (“IFRS”). All dollar figures included therein and in the following discussion and analysis are quoted in the functional currency of Canadian dollars unless otherwise specified. Additional information relevant to the Company’s activities can be found on SEDAR at www.sedar.com or the Company’s website at www.kilogold.net.

This MD&A may contain forward-looking statements that are based on the Company’s expectations, estimates and projections regarding its business and the economic environment in which it operates. These statements speak only as of the date on which they are made, are not guarantees of future performance, and involve risks and uncertainties that are difficult to control or predict. Examples of some of the specific risks associated with the operations of the Company are set out below. Actual outcomes and results may differ materially from those expressed in these forward-looking statements and readers should not place undue reliance on such statements.

Executive Summary

Kilo Goldmines Ltd. is a junior resource company with gold exploration properties in the Democratic Republic of the Congo. The Company is currently engaged in exploration and evaluation of its properties and has no producing asset as yet. The Company delivered its maiden NI 43-101 report in 2011, and is continuing with ongoing exploration to increase the extent of the Mineral Resources. The Company is also engaged in a joint venture with Rio Tinto Mining and Exploration Ltd who are exploring for iron ore on certain of the Company’s properties.

Principal Business and Corporate History

Kilo Goldmines Ltd. (the “Company”) is an Ontario corporation which commenced operations on March 20, 2009. A predecessor corporation, Kilo Goldmines Inc. (“Old Kilo”), commenced operations in January 2006. Prior to March 20, 2009, Kilo Goldmines Ltd. was known as Blue Ribbon Capital Corporation (“Blue Ribbon”), a Capital Pool Company as defined by the TSX Venture Exchange.

The Company is in the process of exploring its mineral resource properties and intends to devote the majority of its efforts to these properties. To date, the Company has not generated revenues and is considered to be in the development stage.

Amalgamation

On September 27, 2007, Old Kilo announced that it had entered into a Letter Agreement (the “Agreement”) with Blue Ribbon, a public corporation formed as a capital pool company. Pursuant to the Agreement, Blue Ribbon was able to acquire all of the issued and outstanding shares of Old Kilo (the “Going Public Transaction”).

On March 20, 2009, pursuant to the Agreement, Old Kilo amalgamated with Blue Ribbon's wholly-owned subsidiary. Completion of the transaction constituted Blue Ribbon's qualifying transaction. The shareholders of Old Kilo held the majority of the outstanding shares of the Company following the transaction, and accordingly, the transaction has been accounted for as a reverse takeover. Since Blue Ribbon's operations do not constitute an economic unit, the transaction has been accounted for as a capital transaction.

On April 21, 2009, the common shares of the Company began trading on the TSX Venture Exchange under the symbol "KGL".

Overall Performance

The Company's activities focused on continuing its exploration and evaluation programs on its existing properties in the Democratic Republic of the Congo, investing approximately \$2.2 million in activities on the Somituri properties during the three months ended June 30, 2012, and approximately \$5.6 million in the nine months ended June 30, 2012. The Exploration section below sets out in greater detail the activities on the various properties during the period. The operating loss for the nine months ended June 30, 2012 was \$1,945,978 compared to a loss of \$2,532,708 for the nine months ended June 30, 2011.

Capital Stock and Financing

During the nine months ended June 30, 2012, the Company raised gross proceeds of \$10,390,000 through a private placement which closed on November 4, 2011, issuing 51,950,000 shares at a price of \$0.20 per share pursuant to this placement. Clarus Securities Inc. acted as exclusive agent in respect of the brokered offering and insiders of the Company acquired 18,150,000 common shares under the non-brokered placement. The Company paid aggregate commissions and finder's fees and costs of \$478,000 in connection with the Offerings, and the securities issued under the Offerings were subject to restrictions on resale for four months.

The Company issued 1,265,517 shares in satisfaction of commitments on its KGL-Sihu properties, and 1,405,777 shares in final settlement upon completion of registration of the KGL-Somituri exploitation licences. As at June 30, 2012, 218,849,978 shares were in issuance, and 49,080,000 share purchase warrants and 20,839,250 options were outstanding. Further details of transactions are provided in the notes to the unaudited financial statements for the nine months ended June 30, 2012.

Corporate Developments

CAMI, the Ministry of Mines in the DRC, completed the registration of the Somituri property licences into the name of KGL-Somituri pursuant to which the Company made a cash payment of € 30,000 and issued 1,405,777 common shares to minority shareholders of KGL-Somituri. The Company finalised the acquisition of its KGL-Sihu properties through a cash payment of \$40,000 and the issuance of 1,265,217 common shares.

On January 3, 2012 Mr Klaus Eckhof stepped down from the Board to free up time for his other business activities, and was succeeded by Mr. Jim Williams. Mr Williams is a United Kingdom resident and is a co-founder and President and Chief Executive Officer of Arian Silver Corporation ("Arian"), a public silver exploration, development and production company listed on London's AIM and the TSX Venture Exchange (AGQ), and the Frankfurt Stock Exchange (I3A). He is a professional geologist and has more than twenty-five years' experience since graduating from the Imperial College's Royal School of Mines with an MSc in Mineral Exploration and Mining. Mr Williams is a Fellow of the Institute of Minerals, Metals, and Mining (FIMMM), as well as a Registered European Engineer (Eur.Ing) and European Geologist (Euro.Geol).

Prior to co-founding Arian, Mr Williams was active in various director, senior officer, and consulting roles for various companies associated with industrial minerals, diamonds, gold, and base metal projects throughout the Americas, Africa and the former Soviet Union .

On January 15, 2012 Mr Stuart Thomson was appointed Vice President Operations. Mr Thomson originates from New Zealand and has a master's degree in Chemical and Materials Engineering and has over 20 years' experience in the resource industry. Over this period he has worked in Australia, Africa (Botswana, Mali, South Africa, Zambia and Zimbabwe), Europe (Ireland) and South America (Brazil). His experience includes operational management, project development and process/business/strategy/environmental consulting roles in the base metals, precious metals, industrial minerals and coal/energy sectors. Mr Thomson has also represented an international mining house at a governmental/industry level on strategic issues facing the mining industry, as well as providing technical/business input at a board level. His corporate exposure includes Queensland Nickel in Australia, Anglo American in South Africa and major international EPCM contractors such AMEC and Fluor Daniel.

Mr Thomson brings a broad spectrum of experience to Kilo across the gold value chain, from resource development to project closure. In addition, he has an in-depth knowledge of both refractory and non-refractory gold ore bodies along with the associated technical, environmental, and business constraints.

On March 9, 2012 Mr Loudon Owen was appointed to the Board. A lawyer by training, Mr. Owen co-founded and currently manages McLean Watson Capital, a private Toronto-based venture capital firm funding high-growth entrepreneurial ventures in the technology sector. Mr. Owen currently serves on the board of directors/trustees of a number of public, private and non-profit corporations and organizations including Hanfeng Evergreen Inc. (Chairman-TSX), Ntegrator International Ltd. (Singapore Stock Exchange) and Posera-HDX Limited (TSX).

Exploration and Operations

KGL Somituri Sprl

During the three month period ended June 30th, 2012 the exploration program consisted of diamond drilling, surface geological mapping, trench excavation and sampling, airborne magnetic and radiometric surveys and soil and drill core sampling for petrographic studies on the Somituri Project Exploitation Licence ("PE") 9691. In addition, reconnaissance geological mapping and soil sampling was carried out on PE137, PE138 and 9695.

The Somituri Project consists of eight *Permis d'Exploitation* ("PE") (Exploitation Licence) covering 606 square kilometres of the Ngayu Archaean Greenstone Belt in Oriental Province of the Democratic Republic of Congo. The properties are underlain by Upper Kibalian banded iron formation ("BIF"), clastic metasedimentary rocks, metavolcanics, and schists; quartz veins, faults and shear zones occur in all of the lithologies. During the 1930s to 1958 the Bagbaie - Adumbi, Kitenge, Manzako and Maipinji gold mines, on PE 9691, produced approximately 300,000 ounces of gold, according to historical records unverified by the Company. The Adumbi gold bearing host rocks have been traced over a strike length of approximately 2,200 metres by the Company. The Kitenge gold bearing host rocks, oriented parallel to and approximately five hundred metres northeast of the Adumbi trend, have been traced over a strike length of about five kilometres. Fifteen hundred metres to the northeast of the Kitenge mine, is the former underground Manzako gold mine. The gold bearing host rocks of the Manzako mine have been mapped over a strike length exceeding two kilometres.

During the three month period ended June 30th, 2012, a sample preparation laboratory was commissioned at the Somituri exploration base camp, in the vicinity of the Adumbi gold deposit.

Although owned by Kilo, the sample preparation facility was built and is operated under contract by ALS Chemex. Pulps of soil samples processed at the on-site facility were submitted to ALS Chemex in Johannesburg, RSA for multi-element analysis. ALS Chemex is accredited to international standards.

PE9691

On March 15, 2012 Kilo announced the results of an updated NI 43-101 compliant inferred resource estimate which concluded that the Adumbi Gold Deposit hosts 1.87 million ounces of gold at 1.63 g/t using a 0.50 g/t Au cut-off. The true thickness of the gold bearing zone varies from 20 metres to 140 metres; drilling indicates gold mineralization extends to a vertical depth of at least 350 metres.

This updated NI 43-101 Report, released and SEDAR filed on April 27, 2012, was prepared by The Mineral Resource Corporation, based in Johannesburg, RSA. This report concluded that the Adumbi Gold Deposit, at a cut-off grade of 0.5 g/t Au, comprises 35.6 million tonnes of inferred gold bearing rock containing 1.87 million ounces of gold grading 1.63 g/t Au. At a cut-off grade of 1.0 g/t Au the Adumbi Gold Deposit comprises 24.6 million tonnes of inferred gold bearing rock containing 1.61 million ounces of gold grading 2.04 g/t Au. The report also concluded that additional infill drilling, surveying, and bulk density determinations were required in order to re-classify resources into the indicated category.

A total of 2,335 metres of diamond drilling was carried out on the Canal, Kitenge and Manzako Prospects during the three months ended June 30th, and a total of 2,617 metres of diamond drilling was completed during the nine month period ended June 30th, 2012, including completion of the drill holes in progress on the Adumbi gold deposit which totalled 282 metres. The Adumbi deposit drill holes were collared to evaluate the northwestern portion of the colonial-era Adumbi gold mine in order to determine vertical and horizontal continuation of mineralization. These diamond drill holes intersected from northwest to southeast the hangingwall tuffaceous metasedimentary rocks, followed by chemical metasedimentary rocks consisting of banded iron formation ("BIF") characterized by chert banded with haematite (oxide zone) and chert banded with magnetite (sulphide zone). The footwall rocks have been assigned a field name of greywacke. In addition, both of these holes, collared 150 metres apart along strike intersected a structurally undeformed (visual observation) massive diorite. The chemical metasedimentary rocks have been sheared; the structural setting is not well understood and the relationship between the footwall rocks and hangingwall rocks has not been determined.

In April 2012 drilling on the first hole collared on the Canal prospect was abandoned at 89.47 metres after encountering technical difficulties in drilling. Three drill holes were completed to target depth on the Manzako Prospect for a total of 578.21 metres. In addition one drill hole on Manzako was abandoned at 80.85 metres and was re-drilled to target depth as one of the three completed holes. A portion of the greater than 1.0 kilometre long Kitenge Prospect gold bearing structure was evaluated at 160 m intervals by six drill holes completed to targeted depth totalling 1,420 metres. An additional 61.90 metres was drilled in two abandoned holes; both were re-drilled to targeted depth. A drill hole in progress on June 30th was at a depth of 128.10 metres. The Manzako drill holes targeted, at 160 metre intervals, a 2.2 kilometre gold bearing structure that was subjected to exploitation during the colonial-era. The Manzako drill holes intersected predominantly intermediate to mafic tuffaceous rocks with shearing and quartz veining; a lesser amount of clastic metasedimentary rocks were also intersected. Clastic metasedimentary rocks, black shale and quartz veins were intersected in the Kitenge Prospect diamond drill holes.

The Adumbi Prospect gold bearing zone, confirmed over a strike length in excess of 2.2 kilometres by drilling, mapping and trenching, remains open along strike to the northwest and to the southeast as well as to depth. Preliminary field indications are that the gold is associated with a late stage pyrite mineralizing event.

During the three months ended March 31st accessible adits and underground workings were geologically mapped. The thicker portions of the BIF are considered due to folding; gold occurs in association with quartz veining hosted within shear zones controlled by the rheological contrasts between the BIF and the metasedimentary rocks. A preliminary interpretation concludes that the preferential orientation of high grade gold zones hosted within the multiple parallel shear zones may be steeply plunging. One wall in each of two adits, with a cumulative total length of 290 metres, was continuously horizontal chip channel sampled; 294 samples including quality control samples were collected. The wall of one internal cross cut was also horizontal chip channel sampled over its 33 metre length; 38 samples including quality control samples were collected. During the three month period ended June 30th mapping was carried out on the Manzako, Kitenge, and Vatican Prospects. Mapping was also carried out along a gold bearing structure that may be the northwest extension of the Kitenge Prospect; herein referred to as the Senegal Prospect.

Re-logging of the Adumbi gold deposit diamond drill core which commenced during the three month period ended March 31st continued during the first half of the three month period ended June 30th. The objective of this program is to add further details on mineralization, structure, alteration and lithology to enable a more definitive interpretation of the ore paragenesis. A total of 46 samples of previously unsampled intervals of drill core, from two holes, were submitted for gold analysis.

During the three month period ended June 30th, a total of 95 samples of drill core, each approximately 10 to 15 cm in length, were selected from Adumbi gold deposit diamond drill hole SADD0019 for petrographic studies by Vancouver Petrographics, British Columbia, Canada. The objective of this study is to determine the gold associations, alteration associated with mineralization and alteration associated with regional orogenic tectonics. A total of 23 samples of half drill core were also collected for gold analysis from drill hole SADD0019.

During the three month period ended June 30th a total of 86.20 metres of trenching was completed in one trench. A total of 749.60 metres of trenching in seven trenches has been completed during the nine month period ended June 30th, 2012, all on the Manzako Prospect.

A total of 2,558 soil samples, including duplicates and commercial quality control samples, was collected over the Canal, Vatican, Monde Arabe and Adumbi Prospects together with the areas between these prospects and the area extending to the western limits of the property during the three months ended June 30th, 2012. During the nine month period ended June 30th, 2012 a total of 5,125 soil samples including duplicates and commercial quality control samples was collected on PE9691, over the Kitenge, Manzako, Canal, Vatican, Monde Arabe and Adumbi Prospects together with the areas between these prospects and the area extending to the western limits of the property. Sample spacing over the Manzako Prospect was predominantly at 20 m intervals on lines 80 m apart; elsewhere the sample spacing is predominantly on lines spaced 320 m, but locally spaced at 160 m intervals with a sampling interval of 20 m. All soil samples were collected at a vertical depth of one metre. The soil samples consist of all material present at the sampled depth; this material is pulverized in its entirety and analyzed for gold and multi-elements.

A Magnetic and Radiometric Survey was carried out by South Africa based New Resolution Geophysics ("NRG") from April 12th to 15th utilizing an Astar B-series helicopter. A total of 1,416 line-kilometres oriented at 040 - 220 degrees (magnetic) and spaced at 100 metre intervals was surveyed. The magnetic survey delineated a number of linear anomalies characterized by demagnetization. In addition, a banded iron formation ("BIF") over a strike length of 2 km, from the demarcated northwestern limit of the Adumbi gold deposit was revealed. The Senegal Prospect, targeted by colonial-era and current artisanal exploitation, flanks a narrow linear magnetic high over a strike length in excess of 1.5 kilometres. This linear magnetic high does not flank the Kitenge Prospect, along projected strike to the southeast.

PE9692

During the three months ended March 31st 2012 the entire 85.8 square kilometre area of PE9692 was soil sampled, with four crews each led by a geologist, at 100 metre intervals on east-west oriented lines at 400 metre intervals. A total of 2,353 samples, including duplicates and commercial quality control samples, were collected. The soil sample sites were recorded as GPS waypoints and the downloaded GPS data was entered into the database. The samples were collected from depths of about 30 to 60 cm; the deeper samples were collected on steep hill slopes to partially mitigate against excessive transport of the material being collected. The samples have been submitted to ALS Chemex for pulverization followed by gold and multi-element analysis. The only exploration activity carried out on this licence during the three months ended June 30th 2012 was sample preparation and submission of the samples for analysis.

PE138

During the three month period ended June 30th, 2012, a total of 500 soil samples, including duplicates and commercial quality control samples, was collected from a portion of the 30.58 square kilometre PE138 by four crews, each led by a geologist, at 100 metre intervals on north-south oriented lines spaced at intervals of 400 metres. The samples in this flat lying area were collected at a depth of about 30 cm. The soil sample sites were recorded as GPS waypoints and the downloaded GPS data was entered into the database.

During the nine month period ended June 30th, 2012 a total of 794 soil samples, including duplicates and commercial quality control samples, was collected from the entire 30.58 square kilometre area of PE138. All of the soil samples were submitted to the on-site sample preparation facility managed by ALS Chemex.

PE137

During the three month period ended June 30th, 2012, a total of 833 soil samples, including duplicates and commercial standards, were collected from the entire 30.58 square kilometre area of PE137 by four crews, each led by a geologist, at 100 metre intervals on north-south oriented lines spaced at intervals of 400 metres. The samples in this relatively flat lying area were collected at a depth of about 30 cm. The soil sample sites were recorded as GPS waypoints and the downloaded GPS data was entered into the database. All of the soil samples were submitted to the on-site sample preparation facility managed by ALS Chemex.

PE9695

During the three month period ended June 30th, 2012, a total of 247 soil samples, including duplicates and commercial standards, were collected from a portion of the 61.17 square kilometre area of PE9695 by up to three crews, each led by a geologist, at 100 metre intervals on east west oriented lines spaced at intervals of 400 metres. The samples in the relatively flat lying areas were collected at a depth of about 30 cm and the hill slopes were sampled at a depth of approximately 60 cm. The soil sample sites were recorded as GPS waypoints and the downloaded GPS data was entered into the database. Some of the samples were submitted to the on-site sample preparation facility managed by ALS Chemex during the three month period ended June 30th, 2012.

The technical and analytical results as well as the inferred resource estimate are detailed in Press Releases issued during the three month period ended June 30th, 2012.

Exploration Expenditures

The table below sets out the expenditures for the period for the nine months ended June 30, 2012:

	KGL-Somituri	KGL-Sihu	KGL-ERW	Total
Acquisition and sustaining costs	517,285	242,905	26,746	786,936
Drilling	1,297,146			1,297,146
Helicopter support	724,018			724,018
Project Camp	536,575			536,575
Sampling/Analysis	620,833			620,833
Professional fees	615,821	7,518	7,517	630,856
Project management/ Administration	339,226			339,226
Geological and Geochemical	417,315			417,315
Travel	166,284			166,284
Trenching	158,924			158,924
Other	183,411		-1,423,525	-1,240,114
Current YTD spend	5,576,838	250,423	-1,389,262	4,437,999
Currency Translation Adjustments	-463,926	-39,731	-78,513	-582,170
Balance beginning of period: Oct 1, 2011	20,626,100	1,603,388	1,850,688	24,080,176
Balance end of period: March 31, 2012	25,739,012	1,814,080	382,913	27,936,005

For the nine months ended June 30, 2012, expenditure on the KGL-Somituri properties was \$5,576,838 compared with a spend of \$6,371,480 during the comparable period in 2011. Drilling activity was suspended ahead of the November election period in the DRC, and also in order to carry out an extensive sampling and aerial survey to enable the Company to plan and prepare for the next phase of drilling. New drill rigs arrived on site at the end of March and the next phase of drilling commenced in April. Drilling expenditures for the three month period ended June 30, 2012 were \$672,675.

The currency translation adjustment reflects movements in the CAD\$/US\$ exchange rate on translating values from the partnership accounts, expressed in the functional currency of United States dollars, into the presentation currency of these consolidated financial statements which is Canadian Dollars. Refer Note 15 a) iii to the unaudited interim financial statements.

Other Properties

The Company completed the acquisition of the KGL-SIHU properties through a cash payment of \$40,000 and the issuance of 1,265,217 shares, which resulted in a charge of \$227,739. No exploration activity was conducted on the KGL-SIHU properties during the period.

Exploration for iron ore was carried out by Rio Tinto Mining and Exploration Limited in terms of the joint venture agreement concerning the Isiro Iron Ore Project, and an accelerated discounted payment, pursuant to the earn-in option to the joint venture agreement, was received from Rio Tinto

in December 2011. The Company's share of this payment was \$1,428,125. A new entity, KWR Iron Sprl, was established as the vehicle to hold the joint venture properties and facilitate the earn-in rights of Rio Tinto to the iron ore assets of the properties.

Results of Operations

The Company is currently engaged in mineral exploration and evaluation, and does not generate revenues from operations. Costs related to the acquisition and exploration of mineral properties are capitalized by property, whilst regulatory and other expenditures incurred to maintain the administrative infrastructure required to operate in Canada are expensed.

Summary of Quarterly Results

The following table sets out selected consolidated quarterly information for the current quarter ending June 30, 2012 and historically for the preceding eight quarters.

Fiscal Year	IFRS								Canadian GAAP	
	2012				2011				2010	
	June	Mar	Dec	Sep	June	Mar	Dec	Sep	Jun	
	\$'000	2012	2012	2011	2011	2011	2011	2010	2010	2010
Net revenues		Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil	Nil
Gain/(Loss) before other items		(305)	(881)	(760)	(1,381)	(813)	(536)	(1,184)	(425)	(1,588)
Currency translation adjustment		594	(505)	(700)	(8)		(490)	(478)		
Comprehensive loss		289	(1,386)	(1,460)	(1,389)	(813)	(1,026)	(1,662)	(425)	(1,588)
Net loss, per share basic and diluted		Nil	0.01	0.01	0.01	0.01	Nil	0.02	0.14	0.02

Factors Affecting Quarterly Results

Fluctuations in quarterly results arise mainly from timing of expensing costs related to the issuance of stock option compensation, and to a lesser degree to administrative costs variations.

For the three and nine month periods ended June 30:

	Nine months ended		Three months ended	
	30-Jun-12	30-Jun-11	30-Jun-12	30-Jun-11
Amortization	177,305	182,669	58,868	60,887
Foreign exchange	14,184	68,063	(123,564)	24,957
Office and miscellaneous	190,741	153,134	61,717	74,161
Management and consulting fees	352,000	768,591	96,000	382,593
Professional fees	159,680	110,151	(3,212)	11,305
Directors' fees	131,000	16,347	44,828	3,188
Shareholder communication	164,465	152,789	48,044	10,620
Share-based payments	506,640	598,826	81,928	-
Community development	-	104,464	-	104,464
Transfer agent and regulatory fees	66,854	67,762	3,689	11,460
Travel and promotion	188,277	295,501	30,493	125,543
Interest and financing costs	21,472	15,010	6,029	5,323
Interest income	(39,847)	(2,414)	(15,208)	1,815
Loss for the period	1,945,978	2,532,708	304,820	812,686
Currency translation adjustment	611,556	1,084,655	(593,665)	116,497
Total Comprehensive Loss for the Period	2,557,534	3,617,363	(288,845)	929,183

For the three months ended June 30, 2012:

The operating loss for the three months ended June 30, 2012 was \$304,820 as compared to a loss of \$812,686 for the three months ended June 30, 2011, an decrease of \$507,866. Stock-based compensation increased by \$81,928. Directors' fees increased by \$43,152 due to changes in the composition of the Board, whilst management and consulting fees decreased by \$286,593 due to organizational changes.

Higher favourable exchange movements were recorded, arising from movements between Canadian dollars, US dollars and to a lesser extent British pounds sterling.

For the nine months ended June 30, 2012:

The operating loss for the nine months ended June 30, 2012 was \$1,945,978, a decrease of \$586,730 over the comparative period. Stock-based compensation decreased by \$92,186, and consulting and management fees decreased by \$416,591 as the prior year included once-off costs associated with organizational changes. Directors fees increased by \$114,652 due to changes in the board composition. The prior year reflected a community development cost of \$104,464 for which there was no comparable expenditure in the current year.

The Currency Translation Adjustment reflects fluctuations in exchange rate movements between CAD\$ vs US\$ arising on translation of the partnership entities which have a functional currency of US\$, into the presentation currency which is CAD\$.

Liquidity and Capital Resources

As at June 30, 2012, the Company had cash resources of \$7,888,436 compared to \$3,973,264 at September 30, 2011, and \$5,938,160 at June 30, 2011. The Company had working capital of \$7,460,304 compared to working capital amounting to \$2,662,730 as at September 30, 2011.

In November 2011 the Company raised \$10.4 million through a private placement and Management believes the Company's cash position is sufficient to meet current planned exploration and operating expenditures and anticipates raising further funds to meet the next phase of exploration and development.

As a mineral exploration and development company with no current production or revenue from mining operations, the Company's cash flows consist of cash outflows for exploration and evaluation, administrative expenses, salaries, property acquisition, and expenditures for depreciable equipment. Financing activities, such as share issuances and shareholder loans, result in cash inflows to the Company. Since its inception, the Company has relied on capital markets (and in particular, equity markets) to fund its exploration and evaluation activities as well as its investments in machinery and equipment. The Company is dependent on obtaining future financing for exploration and evaluation of its resource properties and for any new projects. Details of funds raised are provided in notes 7, 8 and 9 to the unaudited financial statements.

The longer term continuation of the Company as a going concern necessitates the creation of a revenue stream from its mineral assets.

CAPITAL DISCLOSURES

Canadian Institute of Chartered Accountants ("CICA") Handbook Section 1535, Capital Disclosures, requires disclosure of an entity's objectives, policies and processes for managing capital; quantitative data about what the entity regards as capital; whether the entity has complied with any capital requirements; and, if it has not complied, the consequences of such non-compliance. Section 1535 was effective for the Company as of October 1, 2007. The Company's capital is composed of shareholders' equity. The Company's objective is to raise sufficient capital to execute its exploration plan. The Company does not use any capital-based metrics. The Company does not have any externally imposed capital requirements. There have not been any changes to the overall capital risk management strategy during the period ended June 30, 2012.

Treasury Summary

The Company had the following outstanding as at June 30, 2012:

Shares	218,849,978
Options	20,839,250
Warrants	49,080,000

Full details of share issuances as well as warrant and option transactions are provided in notes 7, 8 and 9 to the unaudited financial statements for the nine months ended June 30, 2012.

COURSE OF BUSINESS TRANSACTIONS

Transactions with Related Parties

During the three months ended June 30, 2012, transactions with related parties were:

	2012	2011
Directors fees	133,672	16,438
Management and consulting fees paid to directors and officers	278,000	255,000
Consulting fees paid to a former director/officer and related individuals	74,000	255,000
Investor relations fees with a company controlled by an individual related to a former director/officer	36,000	54,000

Off-Balance Sheet Transactions

The Company has not entered into any off-balance sheet arrangements.

Proposed Transactions

The Company continues to review property and industry information in search of future opportunities in terms of new property acquisitions and business partnerships.

CRITICAL ACCOUNTING ESTIMATES

The preparation of the Company's financial statements requires management to make estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses. Critical accounting estimates used in the preparation of the financial statements are related to the recoverable value of the Company's mineral properties, as well as the value of stock-based compensation. These estimates involve considerable judgment and are, or could be, affected by significant factors that are out of the Company's control.

The Company records all of its property acquisition costs and direct exploration costs as an asset until the properties are placed into production, sold or abandoned, at which time the costs will either be amortized on a units-of-production basis or fully charged to operations. Management reviews the carrying value of the mineral properties for impairment or permanent declines in the value of the property, such as abandonment, and the related project balances are then written off.

Estimates related to stock-based compensation include the volatility of the Company's stock price, as well as when stock options may be exercised. The timing of exercise of stock options is out of the Company's control and depends on a various factors including the market value of the Company's shares and the financial objectives of the holders of stock options.

ACCOUNTING POLICIES AND INITIAL ADOPTION

The Company lists its significant accounting policies in the notes to the unaudited consolidated financial statements for the three month period ended June 30, 2012. Certain policies may differ from those previously reported under pre-changeover Canadian GAAP as a result of the transition to IFRS. An opening IFRS statement of financial position as at October 1, 2010, the Company's transition date, has been prepared as required by IFRS 1 First Time Adoption of International Financial Reporting Standards. The accounting policies selected are those expected to be effective on September 30, 2012, the Company's first annual IFRS reporting date.

BASIS OF PRESENTATION

The consolidated financial statements have been prepared on a going concern basis in accordance with International Financial Reporting Standards. The going concern basis of presentation assumes that the Company will continue in operation for the foreseeable future and be able to realize its assets and discharge its liabilities and commitments in the normal course of business. There is significant doubt about the appropriateness of the use of the going concern assumption because the Company has experienced losses and negative operating cash flows. The application of the going concern concept is dependent on the Company's ability to generate capital through a combination of future profitable operations and external financing. Management is of the opinion that sufficient working capital will be obtained from external financing to meet the Company's liabilities and commitments as they become payable.

The consolidated financial statements do not reflect adjustments that would be necessary if the going concern assumption was not appropriate. If the going concern basis was not appropriate for these consolidated financial statements, then adjustments may be necessary in the carrying value of assets and liabilities and the balance sheet classifications used.

FINANCIAL INSTRUMENTS

The Company has classified its financial instruments as follows:

<u>Financial Instrument</u>	<u>Classification</u>
Cash and cash equivalents	FVTPL
Accounts payable and accrued liabilities	Other financial liabilities
Reclamation bond	Loans and receivables

Cash and cash equivalents include bank deposits and short-term investments. The short-term investments are term deposits with a Canadian chartered bank. The Company is not exposed to significant interest rate risk.

Risks and Uncertainties

The Company's exposure to various risks and the impact upon the Company's financial statements are as follows:

Fair Value

The carrying amounts of cash and cash equivalents, other receivables, accounts payable and accrued liabilities, and amounts due to related parties approximate their fair values because of the short term nature of these items.

Commodity Price Risk

Longer term plans as a gold producer are dependent upon sustained gold commodity prices at a level which permits profitable exploitation of the Company's resources. A substantial decline in the price of gold on world markets could conceivably result in a re-evaluation of project viability.

Currency Risk

The Company's primary operations are located in the Democratic Republic of the Congo. The Company raises financing in Canadian funds and pays most of its DRC costs in United States Dollars, is therefore subject to foreign exchange risk on this payment stream. The Company is also exposed to currency risk on purchases from suppliers denominated in United Kingdom Pounds Sterling, South African Rand and European Euros.

Credit Risk

The Company monitors the financial condition of its venture partners and counterparties to contracts. The Company does not have a significant exposure to any individual third party. Credit risk on amounts receivable is limited to the outstanding balance of such amounts.

Liquidity Risk

The existing financial resources are not sufficient to bring any of the Company's properties into commercial production. The Company will need to obtain additional funding from external sources in order to fund exploration, evaluation and development. There is no assurance that the Company will be able to obtain financing on favourable terms, which could result in a delay or postponement of further exploration or development.

Failure to meet obligations and commitments would require the Company to restate its assets and liabilities on a liquidation basis, which amounts would differ materially from the going concern basis. The Company manages its liquidity risk by forecasting cash flows from operations and anticipated investing and financing activities. Senior management is actively involved in the ongoing review and approval of planned expenditures.

Until such time as the Company enters production and creates a revenue stream it is subject to liquidity risk.

Investment Risk

It is not expected that the Company's mineral properties will create a positive cash flow for the Company in the near future, as this is dependent upon bringing a mine into production.

Issuer Risk

The Company does not have an established record of earnings and financial performance against which operations can be evaluated.

The Company intends to retain future earnings to finance growth and expand operations and does not anticipate paying any dividends until it has sustainable, profitable production.

Operating Risk

Exploration and development involves significant capital investment. While a recommended work program has been identified for the Company's concessions, there is no assurance that financing will be adequate to complete the recommended work program. Additional financing may be required and there is no assurance that the Company will be able to raise the additional funds required.

Title to mining properties involves certain inherent risks. The Company has investigated title to all of its mineral properties and, to the best of its knowledge title to all of its properties is in good standing. The properties in which the Company has committed to earn an interest are located in the DRC, and

the Company is therefore relying on title opinion by legal counsel who is basing such opinions on the laws of the DRC.

The success of the Company will depend on management and key personnel, particularly those individuals with mineral exploration and development expertise. Loss of such management or personnel could adversely affect the success of the business operations and prospects of the Company. The Company currently does not have key man insurance in place.

Certain of the directors and officers of the Company have either full time employment or other business or time restrictions placed on them and accordingly, these directors and officers will not devote their whole time to the affairs of the Company.

Political Risk

The Company operates in an environment of greater political risk than in first world spheres of operation. Kilo works closely with the local community and has been instrumental in upgrading educational facilities for local schools and in providing boreholes for community water supply.

Industry Risk

Mineral exploration involves significant risk and the mining industry is highly speculative. Areas of uncertainty include the size and nature of the mineral resource, environmental issues associated with exploitation and the activity of competitors. Shareholders of the Company should therefore be willing to risk their entire investment.

Future Accounting Changes

IFRS 9 (Financial Instruments: Classification and Measurement), effective for annual periods beginning on or after January 1, 2013, with early adoption permitted, introduces new requirements for the classification and measurement of financial instruments. Management anticipates that this standard will be adopted in the Company's financial statements for the period beginning October 1, 2013, and has not yet determined the potential impact on the Company's financial statements.

IFRS 10 Consolidated Financial Statements ("IFRS 10") replaces the consolidation guidance in IAS 27 Consolidated and Separate Financial Statements ("IAS 27") and SIC-12 Consolidation - Special Purpose Entities by introducing a single consolidation model for all entities based on control, irrespective of the nature of the investee (i.e., whether an entity is controlled through voting rights of investors or through other contractual arrangements as is common in special purpose entities). Under IFRS 10, control is based on whether an investor has 1) power over the investee; 2) exposure, or rights, to variable returns from its involvement with the investee; and 3) the ability to use its power over the investee to affect the amount of the returns. Management anticipates that this standard will be adopted in the Company's financial statements for the period beginning October 1, 2013, and has not yet determined the potential impact on the Company's financial statements.

IFRS 13 Fair Value Measurement aims to improve consistency and reduce complexity by providing a precise definition of fair value and a single source of fair value measurement and disclosure requirements for use across IFRSs. The requirements which are largely aligned between IFRSs and US GAAP, do not extend the use of fair value accounting but provide guidance on how it

should be applied where its use is already required or permitted by other standards within IFRSs or US GAAP. Management anticipates that this standard will be adopted in the Company's financial statements for the period beginning October 1, 2013, and has not yet determined the potential impact on the Company's financial statements.

DISCLOSURE CONTROLS AND PROCEDURES AND INTERNAL CONTROL OVER FINANCIAL REPORTING

The Company's Chief Executive Officer and Chief Financial Officer are responsible for establishing and maintaining the Company's disclosure controls and procedures and internal controls over financial reporting. The Chief Executive Officer and Chief Financial Officer have evaluated the effectiveness of the Company's disclosure controls and procedures and the design of internal controls over financial reporting at June 30, 2012, and have concluded the Company's disclosure controls and procedures and design of internal controls over financial reporting are adequate and effective as per Multilateral Instrument 52-109 – Certification of Disclosure in Companies' Annual and Interim Filings.

There has been no change in the Company's internal control over financial reporting, or in any other factors that could significantly affect internal controls, during the three months ended June 30, 2012.

OTHER MD&A REQUIREMENTS

As at August 23, 2012 the Company had 218,849,978 common shares outstanding. If the Company were to issue 44,987,350 common shares upon conversion of all its outstanding warrants and 20,371,279 common shares upon conversion of all its outstanding options it would raise \$18,305,961.

QUALIFIED PERSON

The scientific and technical data included in this MD&A has been reviewed by Stanley Robinson, M.Sc., F.GAC., P.Geo., a consultant to the Company, and a Qualified Person pursuant to National Instrument 43-101.
